### Fresh Air Inlets

**CAUTION:** Failure to include a fresh air inlet will result in poor flame performance and damage to the fireplace. A fresh air inlet is required. The air inlet must allow for the air path to reach the underside of the unit. This will have to be accounted for in the framing and drywall installation. See the table below for air inlet requirements for each model.

If the air inlet is concealed using a grille, the covered area must be compensated for by having a larger opening.

**Framing**

Prepare a wall with a framed opening, following the dimensions in the table below. Openings beneath the unit are required in order to allow for airflow to reach the underside of the unit.

Framing Dimensions				Drywall Opening	
Model	Width (minimum)	Height	Depth (minimum)	Width	Height
	A	B	C	D*	E*
OLF46-AM	48" (121.9 cm)	31-3/4" (80.6 cm)	12" (30.5 cm)	46-3/16" (117.4 cm)	17-1/2" (44.5 cm)

\* Allows for a 2 mm clearance all around

**Placement**

**! NOTE:** For optimized viewing angle of the flame, it is recommended that the bottom of the unit be mounted between 5" (13 cm) and 50" (127 cm) from the ground.

**Installation in a Bathroom**

If this unit is installed in a bathroom, it must be protected by a GFCI receptacle or circuit. If a receptacle is used, it must be readily accessible.

This electrical appliance is NOT watertight. To prevent electric shock, it must be installed as to prevent water from entering unit, or installed away from showers, tubs, etc. Never locate fireplace where it may fall into a bathtub or other water container.

**Installation Recommendations for Overhanging Objects**

For overhanging temperature-sensitive objects, such as a television, a mantel, or artwork, always follow the recommendations provided by its manufacturer for installation over a heater.
